**Subject:** PCB Sampling Guidance  
[PCB Sampling Guidance.pdf](#)

Hi [redacted]

As we discussed in the field, I spoke with our contact in the PCB program, Kelly, and she gave us guidance for sampling PCBs in a non-point source environment. She said we should make 5' grids and collect the sample in the center of the grid. Page 11 of the attached document shows the method for compositing for non-point sources if you'd like to include it as a reference for the sampling plan and/or trip report. I told Kelley we don't have too large of an area and I would feel more comfortable doing 4-point composites and she said there was no problem with that. The regs only state that you can composite no MORE than 9 grids. Let me know if you have any questions.

Thank you,

**Jessica Duffy**
